

BR15 Twins

BR15 Twins (double head) welding machine was produced on special demand of one our customer and it is exclusive without any similar on market. This machine includes two presses that share the same high-frequency generator and unique control unit controls both presses.

One press with cutter-producing defined shapes (lifejackets, for example). Another press is with welding rod and it is suitable for little-medium welds such as banners, curtains, awning, marine barriers, etc.

This machine is the right choice for those customers who are engaged in manufacturing a wide range of PVC products: instead of two machine (each one dedicated for the appropriate product group) customer can acquire our Twins model, which is economic.

Technical performances – BR10Twins	BR8	BR10	BR15
Power efficiency -			
HF power from generator to electrode	8kW	10kW	15kW
Power Input -			
Maximum power installed	12.4kW	13kW	17kW
Main fuse	32A		
Power supply - voltage	Three phase, 400V ± 3%; 50Hz		
Working frequency	27.125 MHz ± 0.6%		
Pneumatic press drive	750 kg		
Protection against discharge	Standard SCR		
System for hand protection	Balacchi HF Security System		
Management and control	Manual operation panel (Balacchi HF) or touch screen programmable PLC (Siemens)		
Total weight	1900 kg	2000 kg	2080kg
